

The background features a grey and white marbled pattern. In the center, there are faint, grey silhouettes of the main cast members of 'The Addams Family Musical', including Gomez, Morticia, Wednesday, Pugsley, Uncle Fester, and Grandmama. At the bottom of the image, there is a black and white diamond-shaped checkered floor pattern.

The Addams Family Musical

DESIGNING THE SET

Set

The set is the interior of the **Addams family home**. Our director is leaning towards a design based on this image which shows a **first-floor landing** flanked by two **staircases** which wrap around either side of the **crypt cut-out**.

Specifics

- ✓ Central archway (we will build the front doors and crypt doors for this cut-out)
- ✓ First floor landing (extended across the full length with railings, if possible)
- ✓ First floor back wall (with cut-outs that people could stand behind)
- ✓ Two staircases (either side of central archway, slightly wider tread)
- ✓ Hidden exits and entrances behind and onto first floor set (could this occur under and on either side of the first-floor level)

The Aesthetic

VARIETY OF ERAS
(Medieval, Renaissance,
Gothic, Contemporary)

THE ADDAMS CRYPT
(aged stonework,
cracked, chained)

SAGRADA FAMILIA
(lighting potential, the soft curves
juxtaposed with the harsh edges)

STYLIZED WALLPAPERS
(introducing warm metallic
finishes to contrast onyx
and pewter)

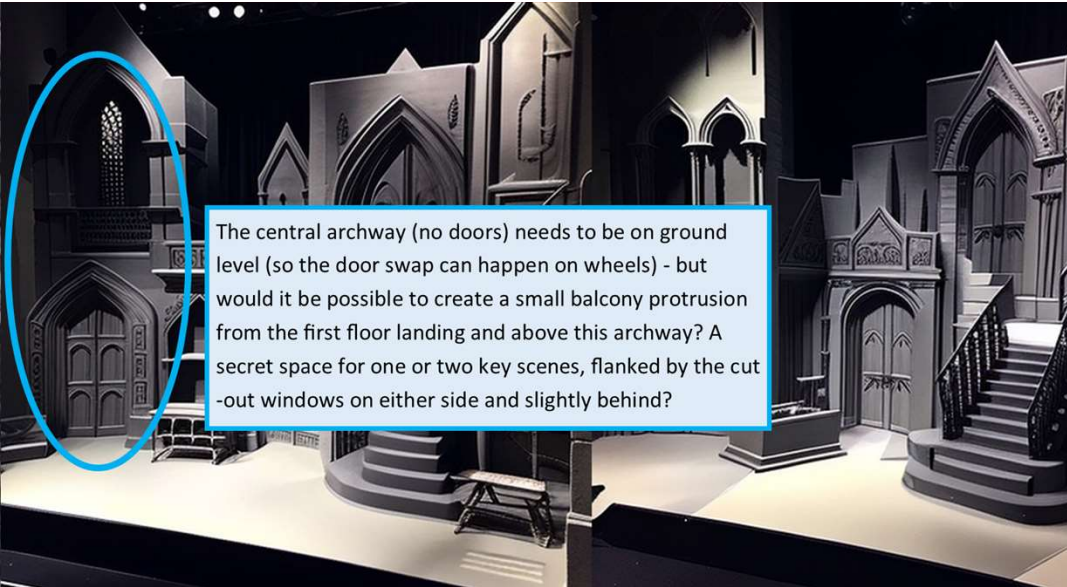

GOTHIC-INSPIRED STYLE
(filigree railings, sharp
lines, wallpapers)

Draft 1 Design Annotations

KPS sent through a series of **AI-generated designs** to be checked. Lauren has annotated them to ensure the **functional requirements** are supported within an exciting **aesthetic** (two staircases, entrance ways, central archway, extended first floor and Gothic cathedral windows)

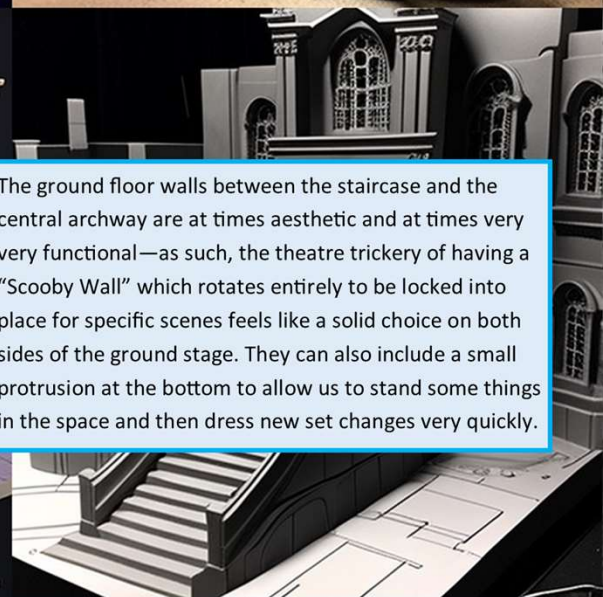

The central archway (no doors) needs to be on ground level (so the door swap can happen on wheels) - but would it be possible to create a small balcony protrusion from the first floor landing and above this archway? A secret space for one or two key scenes, flanked by the cut-out windows on either side and slightly behind?

The Medieval torch detailing and filigree lace type bannisters are my favourite design feature to link with the Gothic cathedral windows.

That first floor landing needs to extend across the entire set build with entrances from the wings to allow for the characters to seem to be walking around inside the house. A staircase on both far ends and perhaps the balcony cutting the monotony by being centrally situated.

The ground floor walls between the staircase and the central archway are at times aesthetic and at times very very functional—as such, the theatre trickery of having a “Scooby Wall” which rotates entirely to be locked into place for specific scenes feels like a solid choice on both sides of the ground stage. They can also include a small protrusion at the bottom to allow us to stand some things in the space and then dress new set changes very quickly.

Draft 2 Design Annotations

KPS have just sent through *design updates*. Lauren will annotate these with her main points of concern: *staircase* to 90° angle and wider; allowing *Scooby walls* to extend into a square; the *balcony* to protrude less or else we have a masking issue.

Draft Designs: FRONT ELEVATION

Two additional entrance archways or doors will be added at ground level for ease of access through the set onto the stage

The style of staircases will change from this design to flat 90°

The depth of the set build will be lessened to accommodate more ground stage choreo space

Draft Designs: 3D RENDER

Balcony for
some fun
moments

Scooby Walls –
we love this
idea so much!

My, my Wednesday!
